S90-08A

Advanced SOA Design & Architecture

A. State data can be temporarily written to and then later retrieved from a dedicated state repository.
B. Caching large amounts of state data in memory negatively impacts scalability.
C. A state repository is not useful for supporting long-running service activities.
D. Database technology is typically used for the implementation of a state repository.

Answer: C

QUESTION: 94
The State Repository pattern is one of the core patterns that comprise the Enterprise Service Bus pattern because complex compositions often include long periods of inactivity while waiting for composed services to complete their processing, thereby providing an opportunity to defer state from memory to a state repository.

A. True
B. False

Answer: B

QUESTION: 95
A service architecture is most comparable in scope to a traditional:

A. component architecture
B. integration architecture
C. application architecture
D. None of the above.

Answer: A

QUESTION: 96
A typical service-oriented enterprise architecture specification can encompass:

A. only one service inventory
B. multiple service inventories
C. non-service-oriented technology architectures
D. None of the above.

Answer: B

QUESTION: 97

One SOA type can inherit the features and limitations of another SOA type with a broader scope. For example, the environment and conventions established by the service-oriented enterprise architecture can be carried over into individual service inventory architectures.

A. True
B. False

Answer: A

QUESTION: 98

Each service composition within a service inventory shares the same service composition architecture.

A. True
B. False

Answer: B

QUESTION: 99

The scope and size of different service inventory architectures can vary.

A. True
B. False

Answer: A

QUESTION: 100

A service inventory architecture is designed to accommodate the composition and recomposition of services.

A. True
B. False

Answer: A
